Preventing issues before they happen

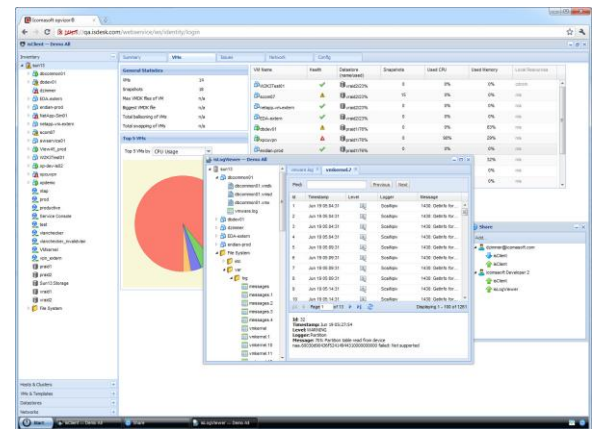

IT start-up launches public beta of opvizer[®], a solution used for predictive issue analysis and issue prevention in VMware environments

Zug, Switzerland, December 6th, 2010 – icomasoft has successfully completed the private beta phase with more than 30 testers of its cloud platform opvizer[®]. The cloud platform identifies issues in virtualized IT infrastructures before they lead to instability or loss of performance and reduces support cases. The public beta is available as of today. opvizer can be downloaded free of charge from www.opvizer.com for real-life testing in your VMware environments.

opvizer identifies in advance when the virtualized IT infrastructure is loosing on performance or might crash. Issues in VMware environments can be analyzed and corrected before they become dangerous. In addition, opvizer provides optimized logfiles and makes it possible to share the infrastructure data with internal and external partners, thus allowing more efficient problem solving. “Our goal is, that opvizer anticipates 60 percent of issues from system behavior. This will make it possible to save considerable support costs,” says Diego Boscardin, CEO of icomasoft.

opvizer is a cloud-based solution that does not require local installation. Data transfer and data storage are encrypted (AES 256). In addition, every customer can set an expiry date after which his data is deleted from the cloud.

Dennis Zimmer, Chief Strategy Officer of icomasoft: “We’re ahead of schedule in terms of product development right now. We look forward to receiving feedback from system administrators of VMware environments.”

The public beta of opvizer is available now for free testing at www.opvizer.com. The public beta phase is slated to last until the end of the first quarter of 2011. The final freeware and charged versions of opvizer will be available in the first half of 2011.

About icomasoft

icomasoft AG specializes in virtualization and cloud computing. The Zug-based company is an independent Swiss manufacturer of software and SaaS solutions for intelligent datacenters. Its products cover the automation and management of virtual IT infrastructures in heterogeneous datacenters together with solutions used to prevent issues and downtimes. Many local and global companies of various sizes rely on icomasoft software solutions. Set up in July 2008 by Diego A. Boscardin (CEO) and Dennis Zimmer (Chief Strategy Officer), icomasoft is owned by its founders together with GCP gamma capital partners AG and Zürcher Kantonalbank.
