## opvizer available now as a release candidate

The solution for predictive issue analysis and issue prevention in VMware environments now available in final test version

**Zug, Switzerland, March 3rd, 2011** – opvizer, the solution to reduce support cases in VMware environments, is now available as a release candidate. opvizer identifies issues in virtualized environments before they can lead to loss of performance or support cases. Developed by the Swiss icomasoft ag, which was founded by Diego Boscardin and Dennis Zimmer, opvizer is now offering a broad spectrum of functions – such as for instance reports, dashboard and the support of an unlimited number of hosts. In addition, early issue detection has been expanded broadly. opvizer can be downloaded free of charge from [www.opvizer.com](http://www.opvizer.com) for real-life testing in your own VMware environment.

opvizer from icomasoft can detect in advance when virtualized IT infrastructures are slowing down or in case of impending system failure. In many cases opvizer detects issues in VMware environments before they become dangerous, frequently making it possible to avoid support cases. opvizer is a SaaS solution that does not require local installation. Data transfer and data storage are continuously encrypted (AES 256).

Early issue detection of the release candidate has been broadly expanded since the beta phase. In addition, the release candidate now has a dashboard that clearly shows all potential problems.

The release candidate from opvizer is obtainable immediately for testing free of charge at [www.opvizer.com](http://www.opvizer.com). Only versions with unlimited hosts will be charged – up to two hosts are for free. The final version of opvizer will be available as freeware and in paid versions in the first half of 2011.

## About icomasoft

icomasoft AG specializes in virtualization and cloud computing. The Zug-based company is an independent Swiss manufacturer of software and SaaS solutions for intelligent datacenters. Its products cover the automation and management of virtual IT infrastructures in heterogeneous datacenters together with solutions to prevent issues and downtimes. Many local and global companies of various sizes rely on icomasoft software solutions. Founded in July 2008 by Diego A. Boscardin (CEO) and Dennis Zimmer (Chief Strategy Officer), icomasoft is owned by its founders together with GCP gamma capital partners AG and Zürcher Kantonalbank.
